INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Left shoulder pain.

HISTORY OF PRESENT ILLNESS: A 31-year-old right-hand dominant male involved in a work-related accident on 11/02/2020. While at work, the patient who was a mechanic was trying to remove a tank from window and tank grabbed onto shirt and pulled out the window from 2nd floor. The EMS arrived on the scene. The police were not called to the scene of the accident. The patient was transported via ambulance to NYC Health + Hospitals/Jacobi and was treated and released the same day. The patient presents today complaining of left shoulder pain sustained in the work related accident. The patient was attending physical therapy for the last 2 years with no relief.

WORK HISTORY: The patient is currently not working.

PAST MEDICAL HISTORY: Noncontributory. There is no previous history of trauma.

PAST SURGICAL HISTORY: Left shoulder arthroscopy in 2020 and in 2021.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient is a nonsmoker. The patient does not drink alcohol. The patient does not use recreational drugs.

ADL CAPABILITIES: The patient states that he can walk for 1/2 block. He can stand for 5 minutes before he has to sit. He can sit for 5 minutes before needing to change positions

secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: play sports, lifting heavy objects, carrying heavy objects, reaching overhead, running errands, and exercising.

PRESENT COMPLAINTS: Left shoulder: Left shoulder pain is 10/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness, weakness, popping, and clicking. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain. Status post arthroscopy x2.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.
General: No fever, chills, night sweats, weight gain, or weight loss.
HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.
Endocrine: No cold intolerance, appetite changes or hair changes.
Skin: Clear, no rashes or lesions.
Neuro: No headaches, dizziness, vertigo or tremor.
Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.
Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.
GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.
GU: No blood in urine, painful urination, loss of bladder control or urinary retention.
Hematology: No active bleeding, bruising, anemia or blood clotting disorders.
Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 5 feet 8 inches, weight is 190 pounds, and BMI is 28.9. The left shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, proximal biceps tendon and biceps. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 75/180 degrees, adduction 30/45 degrees, forward flexion 85/180 degrees, extension 35/60 degrees, internal rotation 40/90 degrees, and external rotation 55/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

DIAGNOSTIC TESTING: MRI of the left shoulder, done on 10/01/2021, shows type III acromion resulting in narrowing of the supraspinatus outlet. Biceps tenosynovitis.

ASSESSMENT:
1. M24.812 Internal derangement, left shoulder.
2. M25.512 Pain, left shoulder.
3. S49.92XA Injury, left shoulder.
4. M25.412 Joint effusion, left shoulder.
5. Status post arthroscopy x2, left shoulder.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for left shoulder.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for left shoulder 3 days/week.
6. Recommend lidocaine challenge for left shoulder.
7. Left shoulder MRI result is pending.
8. Follow up in 4 weeks.

IMPAIRMENT RATING: 100%.

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
