DENNY X. RODRIGUEZ, M.D.  
4720 AVENUE N  
BROOKLYN, NY 11234

PATIENT: SOPHIA MAYNE  
DOB: 02/15/1972 DOS: 08/16/2022 CHART #: 4233  
EXAM: MRI OF THE LEFT SHOULDER WITHOUT CONTRAST

HISTORY: Stabbing pain, radiating down the arm, tingling, numbness.

TECHNIQUE: Multiplanar MR imaging of the left shoulder was performed without contrast on Hitachi open MRI unit.

Coronal T1, T2 and STIR; Sagittal T2; Axial PD and gradient echo images of the shoulder were obtained.

COMPARISON: None.

FINDINGS: No bone marrow edema, bony lesion or fracture identified.

There is fluid in the acromioclavicular joint and subchondral changes in the acromial end of the clavicle and acromial process of the scapula.

The glenohumeral joint is preserved.

There is increased signal in the distal aspect of the supraspinatus tendon suggesting a high-grade more than 50% versus a complete non-retracted tear.

The infraspinatus, long head of the biceps and subscapularis tendons are normal in signal and appearance.

The glenoid labrum and rotator cuff interval demonstrate no abnormality.

The rotator cuff muscles are normal in signal and appearance.

### IMPRESSION:

1. FINDINGS SUGGESTING A HIGH-GRADE MORE THAN 50% TEAR VERSUS A COMPLETE NON-RETRACTED TEAR OF THE DISTAL ASPECT OF THE SUPRASPINATUS TENDON.

*M. K. Val*
