

# SKY RADIOLOGY

PATIENT NAME SARMIENTO, CLAUDIA  
D.O.B. 03/31/1982  
PATIENT # 0000013611  
DATE OF SERVICE 05/12/2022  
REF. PHYSICIAN RAHMAN, QUAZI MD

## MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST

INDICATION: Right shoulder pain

COMPARISON: No prior study was available for comparison at the time of dictation.

TECHNIQUE: T1, T2, and PD, axial, coronal, and sagittal sequences were obtained.

### FINDINGS:

No fracture or suspicious lesion. No os acromiale, but there is low-lying distal acromion. No evidence of significant arthritis and glenohumeral cartilage grossly intact.

Tendinosis supraspinatus and infraspinatus with bursal surface tearing of the supraspinatus.

Intact labrum. The subscapularis tendon is normal. Intact biceps tendon and bicipital labral anchor complex.

The inferior glenohumeral ligament is intact. Teres minor tendon is normal. No muscle atrophy.

No significant effusion. Mild subacromial/subdeltoid bursitis.

### IMPRESSION:

1. Tendinosis supraspinatus and infraspinatus with bursal surface tearing of the supraspinatus.
2. Low-lying distal acromion with adjacent subacromial subdeltoid bursitis

Thank you for this kind referral of this patient.
