PATIENT:	RICKARDS, RASHAD	EXAM DATE:	09/02/2022 12:34 PM
STUDY DESCRIPTION:	MRI ANKLE WITHOUT CONTRAST (JOINT)	MRN:	RICR75719
DOB:	07/25/1992	REFERRING PHYSICIAN:	Davis, Gordon DO
CLINICAL HISTORY	C/O RT ANKLE PAIN DUE TO MVA	GENDER	M

MAGNETIC RESONANCE IMAGING OF RIGHT ANKLE WITHOUT CONTRAST

HISTORY: Complains of right ankle pain due to motor vehicle accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of the right ankle was performed without intravenous contrast.

COMPARISON: None available.

FINDINGS:

OSSEOUS STRUCTURES/MARROW: Mild bone marrow edema in talus, distal aspect of fibula, intermediate cuniform, distal tibia. Subcutaneous edema around ankle extending in to foot.

LIGAMENTS:

TIBIO-FIBULAR SYNDESMOTIC: Mild sprain in talar attachment of tibio-talar component of deltoid ligament.

ANTERIOR TALOFIBULAR: The anterior talofibular ligament is intact.

POSTERIOR TALOFIBULAR: The posterior talofibular ligament is intact.

CALCANEOFIBULAR LIGAMENT: The posterior calcaneofibular ligament is intact.

DELTOID LIGAMENT COMPLEX: The deltoid ligament-complex is intact.

TENDONS:

ACHILLES: The Achilles tendon is intact.

PERONEAL: The peroneal tendon is intact.

MEDIAL FLEXOR: The medial flexor tendon is intact.

ANTERIOR EXTENSOR TENDON: The anterior extensor tendon is intact.

MUSCLES: There is no intramuscular edema or fatty muscle atrophy.

PLANTAR FASCIA: The plantar fascia is intact.

CARTILAGE/SUBCHONDRAL BONE: The cartilage of the tibiotalar, subtalar, talonavicular, and calcaneocuboid joints is intact.

SYNOVIUM /JOINT FLUID: Mild ankle joint effusion.

SINUS TARSI: Normal.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

1. Mild bone marrow edema in talus, distal aspect of fibula, intermediate cuneiform, distal tibia.
2. Mild sprain in talar attachment of tibio-talar component of deltoid ligament.
3. Subcutaneous edema around ankle extending in to foot.
4. Mild ankle joint effusion.
