

PATIENT NAME: FERREIRA WILLIAM  
REFERRING PHYSICIAN: DR. SIKEND

DOB: 12/13/1999  
DOS: 12/09/2021

**MRI OF THE LEFT ANKLE**

**INDICATION:** Pain.

**TECHNIQUE:** Multiple T1 and T2 weighted images of the left ankle were obtained in axial, sagittal and coronal planes without intravenous contrast.

**FINDINGS:** There are no acute displaced fractures, dislocations, destructive bony lesions or marrow infiltration. The Achilles tendon, the plantar fascia, the extensor tendons, the flexor tendons, the peroneal tendons, the anterior and posterior talofibular ligaments and the deltoid ligaments are intact.

Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting. The posterior talar process appears prominent with surrounding fluid suggestive of posterior ankle impingement, in an appropriate clinical setting. There are 4 and 7 mm subcortical cysts in the anterior aspect of the calcaneal bone.

**IMPRESSION:**

1. 4 and 7 mm subcortical cysts in the anterior aspect of the calcaneal bone.
2. Posterior talar process appears prominent with surrounding fluid suggestive of posterior ankle impingement, in an appropriate clinical setting.
3. Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting.
