BHARGAV PATEL, M.D.
79-09 B NORTHERN BLVD
JACKSON HEIGHTS, NY 11372

PATIENT: AHMED BOUDJEENA

DOB: 11/17/1985

DOS: 08/16/2022

CHART #: 25574

EXAM: MRI OF THE RIGHT WRIST WITHOUT CONTRAST

HISTORY: Pain, trauma.

TECHNIQUE: Multiplanar and multisequence magnetic resonance imaging of the right wrist was performed without contrast on Hitachi open MRI unit.

Sagittal T1 weighted images, axial and coronal T1 weighted images, axial and coronal T2 images and coronal STIR and T2 gradient echo images were obtained. Additional higher resolution 3D fast gradient echo images were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: There is no evidence of fracture. The scaphoid is intact. The scapholunate ligament is unremarkable. Distal carpal row appears unremarkable.

The dorsal and ventral tendons are unremarkable. The median nerve is unremarkable. Small joint effusion is seen with more focal fluid accumulation ventral to the proximal carpal row. A small ganglion laterally is suspected measuring 8 x 15 mm.

There is blunting of the triangular fibrocartilage laterally. A focal vertical tear is noted. There appears to be some subtle bone bruising at the triquetrum.

IMPRESSION:

1. A FOCAL VERTICAL TEAR IS NOTED AT THE TRIANGULAR FIBROCARILAGE LATERALLY. THERE IS NO ATTENUATION OR DISPLACEMENT.
2. SMALL JOINT EFFUSION NOTED AT THE CARPUS. THERE IS A PROBABLE GANGLION VENTRAL TO THE PROXIMAL CARPAL ROW LATERALLY, AS NOTED. THERE IS A MILD SOFT TISSUE CONTUSION OVER THE ULNAR STYLOID.
