DOB: 08/03/1993  
DOA: 07/03/2022

## INITIAL ORTHOPEDIC CONSULT EXAMINATION

**CHIEF COMPLAINT:** Right shoulder, left shoulder, right knee, neck, and low-back pain.

**HISTORY OF PRESENT ILLNESS:** A 29-year-old right-hand dominant male involved in a motor vehicle accident on 07/03/2022. The patient was a rear passenger and was wearing a seatbelt. The vehicle was struck on the rear driver side. The airbags did not deploy. The EMS arrived on the scene. The police were called to the scene of the accident. The patient was transported via ambulance to Flushing Hospital Medical Center and was treated and released the same day. The patient presents today complaining of right shoulder, left shoulder, right knee, neck, and low-back pain sustained in the motor vehicle accident. The patient was attending physical therapy 4 times a week with little relief.

**WORK HISTORY:** The patient is currently not working. The patient was working as a Uber driver.

**PAST MEDICAL HISTORY:** Noncontributory. There is no previous history of trauma.

**PAST SURGICAL HISTORY:** Noncontributory.

**DRUG ALLERGIES:** NO KNOWN DRUG ALLERGIES.

**MEDICATIONS:** The patient is not taking any medication at this time.

**SOCIAL HISTORY:** The patient is a nonsmoker. The patient drinks alcohol occasionally. The patient does not use recreational drugs.

**ADL CAPABILITIES:** The patient states that he can walk for 1-2 blocks. He can stand for 2 hours before he has to sit. He can sit for 5 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: garden, play sports, driving, lifting heavy objects, childcare, carrying heavy objects, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

**PRESENT COMPLAINTS:** Right shoulder: Right shoulder pain is 7/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness, weakness, popping, and clicking. The patient is unable to reach overhead, unable to reach behind the back, and unable to sleep at night due to pain.

Left shoulder: Left shoulder pain is 7/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness, weakness, popping, and clicking. The patient is unable to reach overhead, unable to reach behind the back, and unable to sleep at night due to pain.

Right knee: Right knee pain is 8/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has difficulty rising from a chair and has difficulty going up and down stairs. The patient also notes clicking, popping, buckling, and intermittent locking.

**REVIEW OF SYSTEMS:** Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

**General:** No fever, chills, night sweats, weight gain, or weight loss.

**HEENT:** No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

**Endocrine:** No cold intolerance, appetite changes or hair changes.

**Skin:** Clear, no rashes or lesions.

**Neuro:** No headaches, dizziness, vertigo or tremor.

**Respiratory:** No wheezing, coughing, shortness of breath or difficulty breathing.

**Cardiovascular:** No chest pain, murmurs, irregular heart rate or hypertension.

**GI:** No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

**GU:** No blood in urine, painful urination, loss of bladder control or urinary retention.

**Hematology:** No active bleeding, bruising, anemia or blood clotting disorders.

**Psychiatric:** No anxiety, change in sleep pattern, depression or suicidal thoughts.

**PHYSICAL EXAMINATION:** The patient's height is 6 feet 1 inches, weight is 210 pounds, and BMI is 27.7. The right shoulder reveals tenderness to palpation over supraspinatus tendon region. There is no heat, swelling, erythema, crepitus or deformity appreciated. Negative drop arm test. Negative cross-over test. Negative empty can test. Negative Yergason test. Negative deltoid atrophy. Positive O'Brien test. Positive impingement sign. Negative Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 140/180 degrees, adduction 40/45 degrees, forward flexion 120/180 degrees, extension 50/60 degrees, internal rotation 80/90 degrees, and external rotation 80/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The left shoulder reveals tenderness to palpation over supraspinatus tendon region. There is no heat, swelling, erythema, crepitus or deformity appreciated. Negative drop arm test. Negative cross-over test. Negative empty can test. Negative Yergason test. Negative deltoid atrophy. Negative O'Brien test. Negative impingement sign. Negative Lift-off test. Negative Hawkins test. Range of motion, as per goniometer, abduction 150/180 degrees, adduction 45/45 degrees, forward flexion 130/180 degrees, extension 50/60 degrees, internal rotation 80/90 degrees, and external rotation 80/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

The right knee reveals tenderness along the superior pole of patella and inferior pole of the patella. There is swelling appreciated. There is no heat, erythema, crepitus or deformity appreciated. Negative McMurray test. Negative Lachman test. Negative patellofemoral grinding test. Negative anterior drawer. Negative posterior drawer. Range of motion reveals flexion 115/130 degrees and extension 0/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the right lower extremity.

**DIAGNOSTIC TESTING:** MRI of the right shoulder, done on 08/31/2022, shows tendinopathy of the supraspinatus tendon at the anterior leading edge. There is no muscle tendon tear. AC joint is hypertrophy contributing to supraspinatus outlet obstruction. Tenosynovitis of the biceps tendon with increased signal indicating tendinopathy. MRI of the left shoulder, done on 08/31/2022, shows tendinopathy of the supraspinatus tendon with no tears. AC joint is normal with type III acromion and supraspinatus outlet obstruction. Long head biceps tendon is normal and within the bicipital groove with tenosynovitis present. MRI of the right knee, done on 09/06/2022, shows partial ACL tear. Partial LCL tear. Joint effusion. Quadriceps and patellar tendinosis/tendonitis. Supra and infrapatellar plica.

**ASSESSMENT:**

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.01 Adhesive capsulitis, right shoulder.
4. M75.81 Shoulder tendinitis, right shoulder.
5. M75.41 Impingement, right shoulder.
6. M75.21 Bicipital tendinitis, right shoulder.
7. M25.511 Pain, right shoulder.
8. S49.91XA Injury, right shoulder.
9. M25.411 Joint effusion, right shoulder.
10. S46.012A Partial rotator cuff tear, left shoulder.
11. M24.812 Internal derangement, left shoulder.
12. M75.02 Adhesive Capsulitis, left shoulder.
13. M75.82 Shoulder tendinitis, left shoulder.
14. M75.42 Impingement, left shoulder.
15. M65.812 Tenosynovitis, left shoulder.
16. M25.512 Pain, left shoulder.
17. S49.92XA Injury, left shoulder.
18. M25.412 Joint effusion, left shoulder.

19. M23.91 Internal derangement, right knee.
20. S83.519A Anterior cruciate ligament tear, right knee.
21. M25.461 Joint effusion, right knee.
22. M12.569 Traumatic arthropathy, right knee.
23. S80.911A Injury, right knee.
24. M25.561 Pain, right knee.
25. M24.661 Adhesions, right knee.

**PLAN:**

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder, left shoulder, and right knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder, left shoulder, and right knee 3 days/week.
6. Discussed right shoulder arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient would like to proceed with surgery.
7. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.
8. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
9. All the benefits and risks of the right shoulder arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
10. All the questions in regard to the procedure were answered.
11. The patient verbally consents for the arthroscopy of right shoulder and the patient will be scheduled for right shoulder surgery. On the day of the surgery, before the procedure, the surgeon will explain all related questions of the procedure. The patient will sign a written consent and be witnessed by the surgeon.
12. The patient will follow up 1-2 weeks postop or in 2 months if surgery has not been performed yet.

**CAUSALITY:** It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

**AFFIRMATION:** Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby

affirm under penalty of perjury that the statements contained herein are true and accurate.
