PATIENT NAME: BRYAN, SANDRA
PATIENT DOB: 04/07/1967
CHART NUMBER: 044831
EXAM DATE: APRIL 11, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE LEFT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: There is moderate subcutaneous swelling and edema in the anteromedial and anterolateral aspects of the knee. There is partial tear of the anterior cruciate ligament. The posterior cruciate ligament is normal. There is chondral thinning and subchondral signal abnormality present in the anterior aspect of the lateral femoral condyle.

The anterior and posterior horns of the medial and lateral menisci are normal in intact.

The quadriceps tendon and patellar tendons are normal. There is a moderate sized suprapatellar effusion with lateral tracking of the patella. There is chondromalacia patella and lateral tracking of the patella.

There is a rounded area of signal abnormality in the proximal tibial shaft. Plain film correlation recommended.

The gastrocnemius muscles are normal in signal intensity. The popliteal fossa is unremarkable.

IMPRESSION:

1. MODERATE CHONDRAL THINNING AND SUBCHONDRAL SIGNAL ABNORMALITY IN THE ANTERIOR AND ARTICULAR ASPECTS OF THE LATERAL FEMORAL CONDYLE.
2. LATERAL TRACKING OF THE PATELLA WITH SUPRAPATELLAR EFFUSION.
3. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT AND MILD TO MODERATE SIZED JOINT EFFUSION.

Thank you for the courtesy of this referral.
