PATIENT: ASTOR LUCIA
DOB: 02/04/1953
PHYSICIAN: DR. MATHEW
EXAM DATE: 03/22/2022

CT SCAN OF THE RIGHT SHOULDER

INDICATION: Pain.

TECHNIQUE: CT of the shoulder was performed with coronal and sagittal reconstructions without intravenous contrast.

FINDINGS: There are no acute fractures, dislocations, lytic or blastic lesions. The AC joint is intact. There are no significant soft tissue abnormalities. The glenohumeral and acromioclavicular joints are intact. There are no masses or fluid collections. Please note that the ligamentous structures are not well evaluated on the CT examination and MRI is recommended for that purpose, as clinically indicated.

There are mild osteoarthritic changes.

IMPRESSION:

1. Mild osteoarthritic changes.
