PATIENT NAME: DUVERNEY, RICARDO
DATE OF BIRTH: 11/17/1973
MRN #: BR47674
DATE OF SERVICE: 09/22/2022 03:12:27 PM
REFERRING PHYSICIAN: COLIN CLARKE, MD

MRI EXAM OF THE RIGHT KNEE WITHOUT CONTRAST

INDICATION: NF. Right knee pain.

TECHNIQUE: MRI exam of the right knee was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The right knee is intact. There is no fracture. There is bone bruise in the patella.

There is increased signal intensity in the posterior horn of the medial meniscus consistent with a nondisplaced tear. The lateral meniscus is intact. The anterior and posterior cruciate ligaments are maintained. There is strain and partial tear of the medial collateral ligament, at the femoral attachment. The lateral collateral ligament is preserved.

The patellar and quadriceps tendons are intact. The patellofemoral joint is maintained but there is irregularity of the articular margins consistent with chondromalacia patella. There is a knee effusion.

IMPRESSION:

1. Bone bruise in the patella; no fracture.
2. Nondisplaced tear of the posterior horn of the medial meniscus.
3. Strain and partial tear of the medial collateral ligament.
4. Chondromalacia patella.
5. Effusion.

Thank you for the opportunity to participate in the care of this patient.
