Phone: (718) 369-1200
Fax: (718) 223-2932

PATIENT NAME: Jasmine Jackson
DOB: 4/20/1987
DATE OF SERVICE: 10/26/2021
REFERRING DOCTOR: Trishanna Yankannah, PA-C

MRI Left Shoulder:

TECHNIQUE: Multiplanar and multisequential MRI examination of the left shoulder was performed.

FINDINGS: There is a type II to type III acromion. There are slight hypertrophic changes of the acromioclavicular joint.

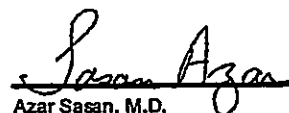

There is thickening and tendinopathy of the supraspinatus tendon. The rest of the rotator cuff tendons are intact.

There is no displaced labral tear. There is no paralabral cyst. The long head of the biceps tendon and short head are intact. There is no Hill-Sachs lesion. There is no soft tissue mass. There is no joint effusion.

IMPRESSION:

1. Tendinopathy/tendonitis of the supraspinatus tendon.
2. Type II to type III acromion with slight hypertrophic changes of the acromioclavicular joint.

Thank you for the courtesy of this consultation.

Azar Sasan, M.D.
Diplomat, American Board of Radiology
