206310573 James Keech MR RT-SHOULDER... 2022-10-27

CLINICAL INDICATION:

MVA, pain with decreased range of motion.

TECHNICAL FACTORS:

Noncontrast MRI of the right shoulder performed utilizing multiplanar and multisequence acquisition.

FINDINGS:

There is no fracture, dislocation or bone lesion. The bones and muscular structures demonstrate normal signal intensity. There is no muscular tear or evidence of hematoma formation.

Joint effusion is not present. Glenoid labrum appears intact without paralabral cyst formation. Biceps tendon is intact as well.

There is moderate rotator cuff tendinopathy and bursitis with associated 2mm linear articular surface partial thickness mid-central supraspinatus tendon tear.

IMPRESSION:

Moderate rotator cuff tendinopathy and bursitis with associated 2mm linear articular surface partial thickness mid-central supraspinatus tendon tear.

We thank you for the courtesy of this referral and look forward to being of service to you in the future.
