PATIENT NAME: LEE, NIKENA
PATIENT DOB: 08/02/1975
CHART NUMBER: 045231
EXAM DATE: JUNE 21, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALKESANDR

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is bony hypertrophy impinging upon the supraspinatus muscle tendon complex.

There is a high grade partial tear of the distal supraspinatus tendon mainly involving the bursal surface near the attachment site. There is fluid present in the subacromial/subdeltoid bursa, the subscapular bursa, and the axillary recess of the glenohumeral joint.

The inferior glenohumeral ligamentous complex is effaced and attenuated but intact.

The humeral head is normal. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove.

There is no acute labral tear. The visualized musculature is normal in signal intensity.

IMPRESSION:

1. ACROMIOCLAVICULAR JOINT HYPERTROPHY IMPINGING UPON THE SUPRASPINATUS MUSCLE TENDON COMPLEX.
2. HIGH GRADE PARTIAL TEAR OF THE BURSAL SURFACE OF THE DISTAL SUPRASPINATUS TENDON WITH FLUID IN THE SUBACROMIAL/SUBDELTOID BURSA AND SUBSCAPULAR BURSA.
3. INTACT BICEPS ANCHOR COMPLEX. NO FRACTURES OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
