PATIENT NAME: ACOSTA, JESUS
PATIENT DOB: 01/02/2001
CHART NUMBER: 045460
EXAM DATE: JULY 31, 2022
REFERRING PHYSICIAN: DR. CLARKE, COLIN

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle.

The supraspinatus, infraspinatus, and subscapularis tendons are intact. There is fluid present in the glenohumeral joint and the subscapular bursa. The long head of the biceps tendon is normally situated in the bicipital groove.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

IMPRESSION:

1. INTACT ACROMIOCLAVICULAR JOINT. NO FRACTURES OR EDEMA OF THE DISTAL CLAVICLE.
2. FLUID IN THE SUBSCAPULAR BURSA AND GLENOHUMERAL JOINT.
3. INTACT BICEPS ANCHOR COMPLEX. NO FRACTURES OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
