PATIENT NAME: BRYAN, SANDRA
PATIENT DOB: 04/07/1967
CHART NUMBER: 044831
EXAM DATE: APRIL 11, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE RIGHT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: There is moderate subcutaneous swelling and edema present in the knee. The medial and lateral menisci are intact. There is no abnormal intrameniscal signal.

There is partial tear of the anterior cruciate ligament with intraarticular joint effusion. The posterior cruciate ligament is normal.

There is chondral thinning and subchondral signal abnormality present in the medial and lateral trochlear groove. There is also chondromalacia patella involving both the medial and lateral patellar facets with a moderate sized suprapatellar effusion and lateral tracking of the patella.

There are no acute femoral, tibial, or fibular fractures. The popliteus tendon is intact.

The gastrocnemius muscles are normal in signal intensity. The popliteal fossa is unremarkable.

IMPRESSION:

1. PATELLOFEMORAL CHONDROMALACIA.
2. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT.
3. SUPRAPATELLAR AND INTRAARTICULAR JOINT EFFUSIONS AND SUBCUTANEOUS SWELLING AND EDEMA IN THE ANTEROMEDIAL AND ANTEROLATERAL ASPECTS OF THE KNEE.

Thank you for the courtesy of this referral.

**** Electronically Signed ****
