

MRI OF THE RIGHT KNEE WITHOUT CONTRAST

RE: JEAN FRANCOIS, MARTIN
DOS: 09/29/2022
DOB: 07/12/1983
MRN: FC0012388

Referring Physician: Dr. Ross-Distin
Referring physician phone #: (845) 201-5909

CLINICAL INDICATION:

Right knee pain status-post motor vehicle accident.

TECHNIQUE:

Multiplanar and multisequence images were obtained.

FINDINGS:

BONE MARROW AND OSSEOUS STRUCTURES: The bone marrow signal intensity is normal. There is no evidence of fracture or contusion. There is no evidence of patellar chondromalacia.

LIGAMENTS AND TENDONS: The anterior cruciate, posterior cruciate, medial collateral and lateral collateral ligaments are normal. The quadriceps tendon and patellar tendons are unremarkable. The patellar retinacula are normal.

MENISCI AND JOINT SURFACES: Grade I signal is seen in the posterior horn of the medial meniscus corresponding to mucoid changes. Anterior horn of the medial meniscus also demonstrates these changes. There is a suprapatellar effusion.

MUSCULATURE AND SOFT TISSUES: There is no evidence of soft tissue mass or abnormal signal intensity. No popliteal cysts are present.

IMPRESSION:

1. Suprapatellar effusion.
2. Mucoid changes anterior and posterior horns of the medial meniscus.
