PATIENT NAME: JOSEPH, TURMAN
DATE OF BIRTH: 12/20/1980
MRN #: JM23821
DATE OF SERVICE: 10/25/2022
REFERRING PHYSICIAN: JEFF J. MOLLINS, DC

PROCEDURE: MRI OF THE CERVICAL SPINE

INDICATION: Date of accident: 10/07/2022. Neck pain.

TECHNIQUE: Multiple pulse sequences were obtained in the coronal, sagittal and axial planes.

COMPARISON: None.

FINDINGS: Normal lordosis is identified with grade 1 retrolisthesis of C2 on C3, C3 on C4 and C4 on C5. There is grade 1 retrolisthesis of C6 on C7.

The vertebral heights are maintained. The marrow signal is maintained. The prevertebral and paraspinal soft tissues are within normal limits.

The cerebellar tonsils are normal in position.

The cord signal is maintained.

Level by level evaluation:

At the C2/3 level there is no disc bulge or disc herniation. There is no central canal or neuroforaminal encroachment.

At the C3/4 level posterior disc herniation is identified abutting the thecal sac resulting in central canal encroachment without neuroforaminal encroachment.

At the C4/5 level productive changes are identified with posterior disc herniation resulting in central and bilateral neuroforaminal encroachment with moderate bilateral neuroforaminal narrowing. The right vertebral artery encroaches upon right neuroforamina.

At the C5/6 level disc bulge is identified with productive changes without central canal or neuroforaminal encroachment.

At the C6/7 level posterior disc herniation is identified flattening the thecal sac with productive changes resulting in central and bilateral neuroforaminal encroachment with moderate to severe right neuroforaminal narrowing.

At the C7/T1 level posterior disc herniation is identified abutting the thecal sac resulting in central canal encroachment without neuroforaminal encroachment.

IMPRESSION:

1. Grade 1 retrolisthesis of C2 on C3, C3 on C4 and C4 on C5.
2. Grade 1 retrolisthesis of C6 on C7.
3. Normal cord signal.
