DENNY X. RODRIGUEZ, M.D.
4720 AVENUE N
BROOKLYN, NY 11234

PATIENT: JEAN ST. SURIN
DOB: 02/27/1974 DOS: 08/02/2022 CHART #: 4214
EXAM: MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: Shoulder pain, limited range of motion. The pain radiates down the arm.

TECHNIQUE: Multiplanar MR imaging of the right shoulder was performed without contrast on Hitachi open MRI unit.

Coronal T1, T2 and STIR; Sagittal T2; Axial PD and gradient echo images of the shoulder were obtained.

COMPARISON: None.

FINDINGS: There are subchondral changes in the acromioclavicular joint. The glenohumeral joint is preserved.

No bony lesions or bone marrow edema is identified.

No fracture is appreciated. Linear increased signal is noted in the distal aspect of the supraspinatus tendon along the articular surface suggesting a partial non-retracted tear.

The infraspinatus, long head of the biceps and subscapularis tendons are normal in signal and appearance.

The glenoid labrum and rotator cuff interval demonstrate no abnormality. The rotator cuff muscles and periarticular soft tissue planes are maintained.

IMPRESSION:

PARTIAL NON-RETRACTED ARTICULAR SURFACE TEAR OF THE DISTAL ASPECT OF THE SUPRASPINATUS TENDON.

Thank you for referring this patient to us.
