PATIENT NAME: VALENTIN, AMARILIS
PATIENT DOB: 09/09/1974
CHART NUMBER: 045752
EXAM DATE: SEPTEMBER 21, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE RIGHT SHOULDER

Clinical History: Pain

Protocol: T1, T2, GRE images in coronal, axial, and sagittal projections.

Findings: The acromioclavicular joint is intact with undersurface hypertrophy impinging upon the supraspinatus muscle tendon complex.

The supraspinatus, infraspinatus, and subscapularis tendons are intact. There is partial tear of the distal supraspinatus tendon with fluid distending the subacromial-subdeltoid bursa. Fluid is also collecting in the axillary recess of the glenohumeral joint.

There is an intact biceps labral complex.

A normal inferior glenohumeral ligament complex is noted.

The anterior inferior labrum is intact. The posterior labrum is normal.

There is an intact biceps tendon in the bicipital groove.

The glenoid fossa is normal. There is no sclerosis or signal abnormality in the glenoid.

There is a normal coracohumeral ligament/superior glenohumeral ligament complex.

IMPRESSION:

1. PARTIAL TEAR OF THE BURSAL SURFACE OF THE DISTAL SUPRASPINATUS TENDON WITH FLUID IN THE GLENOHUMERAL JOINT AND THE SUBACROMIAL-SUBDELTOID BURSA.
2. INTACT ACROMIOCLAVICULAR JOINT WITH UNDERSURFACE HYPERTROPHY IMPINGING UPON THE MYOTENDINOUS JUNCTION.
3. INTACT BICEPS LABRAL COMPLEX AND INFERIOR GLENOHUMERAL LIGAMENTOUS COMPLEX

Thank you for the courtesy of this referral.
