MRI OF THE LEFT ANKLE WITHOUT CONTRAST

INDICATION: Pain

TECHNIQUE: T1, T2, and STIR weighted sequences were obtained.

COMPARISON: No prior studies were available for comparison at the time of dictation.

FINDINGS:

Interstitial tear and sprain of the ATFL which is lax. Sprain of the calcaneofibular ligament. Sprain of the deltoid ligament.

No fracture. The ankle mortise is intact, without widening. The distal tibiofibular syndesmosis is intact. No osteochondral lesion. Normal articular cartilage. No coalition. The bone marrow signal is normal.

Achilles tendon is intact. Normal posterior tibial tendon. The flexor digitorum longus tendon is normal. Flexor hallucis longus tendon is normal. Extensor tendons are intact. Normal peroneus brevis and longus tendons.

The posterior talofibular ligament is intact. The syndesmotric ligaments are intact.

No joint effusion. No plantar fasciitis. Normal sinus Tarsi. No muscle edema.

IMPRESSION:

- Interstitial tear and sprain of the ATFL which is lax.
- Sprain of the calcaneofibular ligament.
- Sprain of the deltoid ligament.

Thank you for referring your patient to us for evaluation.

Sincerely,

MARIAN SEABROOK
