Exam requested by:
CATHY DELERME-PAGAN MD
106 PENNSYLVANIA AVE
BROOKLYN NY 11207

SITE PERFORMED: LHR LYNBROOK
SITE PHONE: (631) 277-1600

Patient: CARTER, LATASHA
Date of Birth: 09-06-1976
Phone: (516) 644-8019
MRN: 15546166R **Acc:** 1024357736
Date of Exam: 08-31-2022

EXAM: CT LEFT ANKLE WITHOUT CONTRAST

Note - This patient has received 0 CT studies and 0 Myocardial Perfusion studies within our network over the previous 12 month period.

HISTORY: Pain.

TECHNIQUE: Multiple axial CT images were obtained through the left ankle without the use of intravenous contrast. Coronal and sagittal images were reconstructed from the axial data. No 3D images were requested. One or more of the following dose reduction techniques were used: automated exposure control, adjustment of the mA and/or kV according to patient size, use of iterative reconstruction technique.

COMPARISON: None.

FINDINGS:

Bones/Joints: Prior open reduction internal fixation of the distal fibula with plate and screws. Beam hardening artifact from hardware limits evaluation. Small ossicles adjacent to the medial talus and inferior to the medial malleolus consistent with sequelae of prior avulsion injuries. Linear sclerosis at the posterior malleolus may reflect sequela of prior healed fracture. No acute fracture or dislocation. Ankle mortise is intact. Enthesopathic changes noted at the posterior calcaneus. Os navicularis noted.

Tendons/ligaments: No tendon or ligament thickening or obvious fat-filled or fluid-filled tears within the limits of CT technique.

Muscles: Unremarkable.

Subcutaneous tissues: Unremarkable.

IMPRESSION:

1. Prior ORIF of the distal fibula. Small ossicles adjacent to the talus and medial malleolus likely represent sequelae of
