RE: PATIENT: LEON, MARIE

DOB: 12/08/1981

PTH# 170589

Dear Dr. Michael Trimba*:

MRI OF THE RIGHT KNEE:

Patient Clinical History: Patient Medical History Unavailable

MRI examination was performed using multiplanar, multisequence imaging.

The study demonstrates normal bony alignment. There is no fracture or dislocation. No focal lytic or sclerotic lesion is identified. The anterior and posterior cruciate ligaments, medial and lateral collateral ligament complexes and extensor mechanism of the patella are all intact. Examination of the menisci demonstrates a small oblique peripheral tear at the posterior horn of the medial meniscus. The lateral meniscus is intact.

IMPRESSION:

Small oblique peripheral tear at the posterior horn of the medial meniscus. Mild knee joint effusion. No fracture or ACL tear.

Sincerely,
