PATIENT NAME	SANTOS, EVA
D.O.B.	10/14/1973
PATIENT #	0000013461
DATE OF SERVICE	04/26/2022
REF. PHYSICIAN	KOPACH, ALEXANDR MD

MRI OF THE RIGHT KNEE WITHOUT CONTRAST

INDICATION: Right knee pain

COMPARISON: No prior studies were available for comparison at the time of dictation.

TECHNIQUE: T1, T2, and PD axial, coronal, and sagittal sequences without intravenous contrast.

FINDINGS:

Osseous structures: No evidence of fracture or suspicious lesions. Marrow signal preserved.

Menisci: Nondisplaced horizontal tear anterior horn and anterior body lateral meniscus.. No meniscocapsular separation. No meniscal cyst.

Anterior cruciate ligament: Intact

Posterior cruciate ligament: Intact

Mediocolateral ligament: Normal

The lateral collateral ligament/posterolateral corner complex: Iliotibial band, lateral (fibular) collateral ligament, biceps femoris, and conjoined tendons intact. Popliteus tendon and muscle are normal. Remaining visualized posterolateral corner structures are without significant abnormality.

Quadriceps and patellar tendons: Intact. No patellar tilt or subluxation. Patellofemoral ligaments are intact.

Cartilage: High-grade and potentially focal full-thickness chondral fissuring involving the superior median patellar ridge and medial patellar facet. Medial and lateral tibiofemoral compartment cartilage is relatively well maintained.

Joint spaces: Anatomically aligned. No loose bodies. Physiologic joint fluid is present but with small popliteal cyst.

Extra articular soft tissues: Visualized muscle signal is normal. No suspicious fluid collection.

IMPRESSION:

1. Nondisplaced horizontal tear anterior horn and anterior body lateral meniscus.
2. Focal areas of high-grade and full thickness chondral fissuring with suspected punctate subchondral marrow edema median patellar ridge and medial patellar facet.

Thank you for this kind referral of this patient.
