MICHAEL JURKOWICH MD

243-51 MERRICK BLVD

ROSEDALE, NY 11422

MAGNETIC RESONANCE IMAGING OF THE LEFT KNEE

TECHNIQUE: Multiplanar, multisequential MRI was performed in the 30-degree tilt position.

HISTORY: Patient complains of left knee pain with interval change.

INTERPRETATION: There is peripheral grade-II signal in the body of the lateral meniscus with intermediate probability of a tear. No meniscocapsular separation. The medial meniscus is intact.

ACL, PCL, and LCL complex are intact. Grade I sprain of the MCL.

Quadriceps insertional tendinosis noted. The infrapatellar, popliteus, bicep femoris tendons, and ITB are intact.

No chondral or osteochondral defects, marrow edema, fracture, or intraosseous lesions.

Small synovial effusion. No infiltration of the infrapatellar fat pad, abnormal muscle signal intensity, or thickened plica noted.

IMPRESSION:

- Grade II peripheral signal in the body of the lateral meniscus with intermediate probability for a tear. No meniscocapsular separation.
- Grade I sprain of MCL.
- Small synovial effusion.

I thank you for referring your patient to us for evaluation.
