PATIENT:	MARTINEZ, JAIRO	EXAM DATE:	03/01/2022 1:45 PM
STUDY DESCRIPTION:	MRI WRIST WITHOUT CONTRAST	MRN:	MARJ58253
DOB:	02/08/1988	REFERRING PHYSICIAN:	Qureshi, Adnan
CLINICAL HISTORY	LT WRIST SCANNED LT WRIST PAIN DUE TO WC ACC	GENDER	M

#### MAGNETIC RESONANCE IMAGING OF LEFT WRIST WITHOUT CONTRAST

HISTORY: Left wrist pain due to work accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of left wrist was performed without intravenous contrast.

COMPARISON: None available.

#### FINDINGS:

OSSEOUS STRUCTURES/MARROW: No fractures or osteonecrosis.

OSSEOUS ALIGNMENT: Anatomic alignment.

#### INTEROSSEOUS LIGAMENTS:

SCAPHOLUNATE LIGAMENT: Hyperintense signal of the palmar band of the scapholunate ligament noted with no demonstrable widening of the scapholunate distance.

LUNOTRIQUETRAL LIGAMENT: The lunotriquetral ligament is intact.

TFCC: The central disc of the TFCC is intact. The peripheral TFCC is intact.

MUSCLES: There is no intramuscular edema or fatty muscle atrophy.

TENDONS: The flexor and extensor tendons are intact.

CARTILAGE/SUBCHONDRAL BONE: Articular cartilage intact.

SYNOVIUM /JOINT FLUID: Distal radioulnar joint effusion.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

Small synovial / ganglion cysts noted along the radial aspect of the flexor tendons and in the volar aspect of the trapezium.

#### IMPRESSION:

1. Hyperintense signal of the volar scapholunate ligament suggestive of sprain with no demonstrable widening of the scapholunate distance.
2. Small synovial / ganglion cysts noted along the radial aspect of the flexor tendons and in the volar aspect of the trapezium.
3. Distal radioulnar joint effusion.
