PATIENT NAME: ACOSTA SANCHEZ, EDWIN  
PATIENT DOB: 09/13/1994  
CHART NUMBER: 045459  
EXAM DATE: JULY 31, 2022  
REFERRING PHYSICIAN: DR. CLARKE, COLIN

**MRI OF THE LEFT SHOULDER**

**Clinical History:** Pain; s/p injury.

**Protocol:** T1 and T2 axial and sagittal images

**Findings:** The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle.

The supraspinatus tendon is intact with a somewhat frayed appearance to the distal bursal surface consistent with partial tear. The infraspinatus and subscapularis tendons are intact.

The humeral head is normal. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

**IMPRESSION:**

1. PARTIAL TEAR OF THE BURSAL SURFACE OF THE SUPRASPINATUS TENDON NEAR THE ATTACHMENT SITE.
2. INTACT BICEPS ANCHOR COMPLEX. NO FRACTURE OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
