UPENDRA SINHA, M.D.
1314 CONEY ISLAND AVENUE
BROOKLYN, NY 11230

PATIENT: JUDITH CORDOVA
DOB: 09/22/1968
DOS: 03/28/2022
CHART #: 24682
EXAM: MRI OF THE LEFT ANKLE WITHOUT CONTRAST

HISTORY: Sharp pain.

TECHNIQUE: Multiplanar MR imaging of the left ankle was performed without contrast on Hitachi open MRI unit.

Sagittal T1 and fat suppressed weighted images, axial proton density T1 and STIR weighted images and coronal STIR and T2 images of the ankle were obtained without IV contrast.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: The Achilles tendon is intact.

The plantar fascia is unremarkable. There is mild edema at the subtalar joint. There is a small effusion at the tibiotalar joint. There is heterogeneous oblique T2 signal is seen at the central to caudal aspect of the calcaneus seen on images #6-#8 of series #6. Extension to the middle subtalar facet is seen on image #7 of series #5. An oblique fracture is thought to be present. There are more focal areas of T2 signal and small cysts may be present.

Proximal forefoot is unremarkable. The Lisfranc joint is unremarkable.

The anterior tendon group is unremarkable. Mild tenosynovitis changes are seen at the posterior tibial tendon sheath. The talar dome is unremarkable. There is no ankle mortise widening. Soft tissue contusions are seen medially and laterally. Deltoid ligament is unremarkable. There is slight diffuse thinning of the anterior talofibular ligament with reactive changes. The remainder of the lateral ligaments are unremarkable.

The distal tibia and fibula are unremarkable.

CHART #: 24682

EXAM: MRI OF THE LEFT ANKLE WITHOUT CONTRAST

PAGE 2

IMPRESSION:

1. AN OBLIQUE FRACTURE OF THE CALCANEUS IS NOTED EXTENDING TO THE MIDDLE SUBTALAR FACET. SMALL CYSTS CENTRALLY ALONG THE COURSE OF THIS FRACTURE ARE LIKELY. REACTIVE EDEMA IS SEEN AT THE SUBTALAR JOINT.
2. SMALL EFFUSION IS SEEN AT THE TIBIOTALAR JOINT.
3. A PARTIAL-THICKNESS TEAR OF THE ANTERIOR TALOFIBULAR LIGAMENT IS SEEN.
4. SOFT TISSUE CONTUSIONS ARE SEEN MEDIALY AND LATERALLY OVER THE DISTAL TIBIA AND FIBULA.

Thank you for referring this patient to us.
