BROOKLYN NY 11223

**SITE PERFORMED: BENSONHURST**

**SITE PHONE: (718) 282-7000**

**Patient: MAMATOVA, SHAKHLO**  
**Date of Birth: 03-11-1984**  
**Phone: (917) 432-4936**  
**MRN: 10964770R Acc: 1021265960**  
**Date of Exam: 12-15-2021**

**EXAM: MRI LEFT HIP WITHOUT CONTRAST**

**HISTORY:** 37-year-old female. Left hip pain

**TECHNIQUE:** MRI of the left hip was performed utilizing standard protocol on a 1.5 Tesla MRI.

**COMPARISON:** X-ray dated 12/14/2021

**FINDINGS:**

All clockface descriptions presume that 12:00 is directed toward the head of the patient and 3:00 is located anteriorly. The transverse acetabular ligament lies at the 5:00 position.

**Femur:** Normal visualized femur. No fracture. The femoral head maintains normal contour. No avascular necrosis. No edema. No significant anteversion

**Acetabulum:** Normal acetabulum.

**Femoroacetabular Joint:** There are no visualized labral tears. There are no perilabral cysts. There are no visualized articular cartilage abnormalities. There is no effusion.

**Abductors:** Normal insertions of the gluteus medius and minimus tendons. There are no tears.

**Iliopsoas:** Normal iliopsoas tendon. There is no iliopsoas bursitis.

**Pubis:** Normal superior and inferior pubic rami.

**Ischium:** Normal ischial tuberosity. Normal origins of the semimembranosus, semitendinosus, and biceps femoris tendons.

**Ilium:** Normal visualized iliac bone and sacroiliac joint. Otherwise normal visualized osseous pelvis.

**Internal Soft Tissues:** Moderate fluid within the pelvic cul-de-sac is noted.
