PATIENT NAME: TEJADA, KENIA  
DATE OF BIRTH: 12/05/1976  
MRN #: BR47759  
DATE OF SERVICE: 07/15/2022 12:23:12 PM  
REFERRING PHYSICIAN: JORDAN FERSEL, MD

**MRI EXAM OF THE LEFT KNEE WITHOUT CONTRAST**

**INDICATION:** PAIN.

**TECHNIQUE:** MRI exam of the left knee was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

**COMPARISON:** There are no prior exams for comparison.

**FINDINGS:** The left knee is intact. There is no fracture or focal bony lesion.

There is a nondisplaced tear of the posterior horn of the medial meniscus. The lateral meniscus is intact. The anterior and posterior cruciate ligaments are maintained. There is strain of the medial collateral ligament. The lateral collateral ligament is preserved.

The patellar and quadriceps tendons are intact. There is prominent soft tissue swelling in the prepatellar soft tissues consistent with severe prepatellar bursitis. An oval area of soft tissue density in proximity may represent a benign lipoma; further evaluation could be obtained with CT study.. The patellofemoral joint is maintained. There is a knee effusion.

**IMPRESSION:**

1. No fracture or focal bony lesion.
2. Nondisplaced tear of the posterior horn of the medial meniscus.
3. Strain of the medial collateral ligament.
4. Severe prepatellar bursitis and additional focal or focal lesion which may represent a benign lipoma, with follow-up recommended..
5. Effusion.

Thank you for the opportunity to participate in the care of this patient.

STEPHEN P. TODER, M.D.  
Board Certified Diagnostic Radiologist
