PATIENT NAME: MCKEN, CARL
DATE OF BIRTH: 08/09/1983
MRN #: BR45466
DATE OF SERVICE: 01/24/2022 08:01:58 PM
REFERRING PHYSICIAN: JEAN PIERRE BARAKAT, MD

MRI EXAM OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: PAIN.

TECHNIQUE: MRI exam of the left shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left shoulder is intact. There is no fracture. There is bone bruise in the humeral head. There are superior and inferior osteophytes at the acromioclavicular joint.

There is tendinopathy and partial tear of the supraspinatus tendon with increased signal intensity in the distal portion of the tendon on T2-weighted sequences and with fluid in the subacromium and subdeltoid bursa. There is tendinopathy of the infraspinatus tendon. The subscapularis and teres minor tendons are intact.

The glenohumeral joint is maintained. The anterior and posterior glenoid labrum are intact. There is a joint effusion.

IMPRESSION:

1. Intact left shoulder; bone bruises in the humeral head; osteophytes at the acromioclavicular joint.
2. Tendinopathy and partial tear of the supraspinatus tendon.
3. Tendinopathy of the infraspinatus tendon.
4. Intact glenohumeral joint with effusion.

Thank you for the opportunity to participate in the care of this patient.
