POST-OPERATIVE NOTE

The patient is status post arthroscopy of the right shoulder on 08/04/2022 and comes today for postoperative follow-up. The patient was lost to follow up.

The sutures were removed. The surgical site was cleaned with alcohol pad.

There is no evidence of any drainage, redness, or discharge from the surgical site.

There is no swelling or edema.

Medial incision erythema with scab rejecting suture, scab debrided, and has incision healed and closed. Small cm opening. Applied triple abx with bandage applied, supply given for wound care x3 days.

The patient is afebrile.

The patient has regained almost full mobility of the shoulder.

The patient has minimal pain.

The patient may start home exercise program.

The patient has regained almost 95% of mobility.

The patient was advised physical therapy 3 times a week for 4 weeks to regain full mobility of the right shoulder.

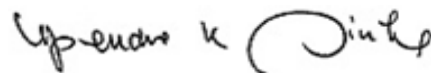

CPM and ice machine use x3 daily.

The patient will follow up on Monday at 12 p.m. at 150 Graham Ave for wound check.
