**LEFT SHOULDER MRI WITHOUT CONTRAST**

**HISTORY:** Left shoulder pain status post motor vehicle accident

**TECHNIQUE:** Multiplanar, multi-sequence MRI of the left shoulder was performed without intravenous contrast.

**COMPARISON:** None available.

**FINDINGS:**

**ROTATOR CUFF:** There is supraspinatus, infraspinatus, and subscapularis tendinitis. There is no rotator cuff tear.

**MUSCLES:** No muscle edema or fatty muscle atrophy.

**AC JOINT:** There is mild acromioclavicular joint disease with subchondral cystic changes.

**BICEPS TENDON:** Intact long head of the biceps tendon.

**LABRUM/LIGAMENTS:** There are multifocal tears of the glenoid labrum. There are paralabral cysts adjacent to the posterior inferior and anterior inferior glenoid.

**GLENOHUMERAL CARTILAGE:** There are broad regions of full-thickness and partial-thickness chondral loss on both sides of the glenohumeral joint with subchondral cystic changes and marginal osteophytes.

**SYNOVIUM/JOINT FLUID:** There is a small glenohumeral joint effusion.

**MARROW:** No fractures or osteonecrosis.

**NEUROVASCULAR STRUCTURES:** Normal in course and caliber.

**PERIPHERAL SOFT TISSUES:** Normal.

**IMPRESSION:**

Multifocal tears of the glenoid labrum with paralabral cysts adjacent to the posterior inferior and anterior inferior glenoid. Background of severe glenohumeral joint arthrosis.
