PATIENT NAME: STEELE, PETER
PATIENT DOB: 07/20/1960
CHART NUMBER: 045090
EXAM DATE: MAY 25, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle. There is a down sloping acromion process and undersurface hypertrophy impinging upon the supraspinatus muscle tendon complex.

There is tendinosis and partial tear of the bursal surface of the distal supraspinatus tendon with fluid present in the subacromial/subdeltoid bursa. The infraspinatus tendon and subscapularis tendons are intact.

The humeral head is normal in position and appearance. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove and surrounded by fluid.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

IMPRESSION:

1. TENDINOSIS OF THE SUPRASPINATUS TENDON WITH FOCAL UNDERSURFACE TEARS AND A PARTIAL TEAR OF THE BURSAL SURFACE OF THE DISTAL SUPRASPINATUS TENDON NEAR THE ATTACHMENT SITE AND FLUID IN THE SUBACROMIAL/SUBDELTOID BURSA.
2. BICEPS TENDINOSIS. NO FRACTURES OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
