IDY LIANG, NP-C  
5205 CHURCH AVENUE  
BROOKLYN, NY 11203

PATIENT: KEVIN HOWARD  
DOB: 12/08/1962 DOS: 10/06/2022 CHART #: 4316  
EXAM: MRI OF THE RIGHT HIP WITHOUT CONTRAST

HISTORY: Right hip pain.

TECHNIQUE: Multiplanar MR imaging of the right hip was performed without contrast on Hitachi open MRI unit.

Coronal T1 weighted images, axial proton density and T2 weighted images and coronal STIR images, Coronal, axial and sagittal T2 oblique of the hip were obtained without contrast.

COMPARISON: None.

FINDINGS: Technical limitations are noted secondary to motion on multiple sequences.

There is fluid adjacent to the greater trochanter suggesting greater trochanteric bursitis.

Periarticular soft tissue planes, ligaments, tendons and muscle planes are preserved.

No fluid collections are seen. No joint effusion is seen. The articular cartilage is maintained. The acetabular labrum is not optimally assessed on these images.

Incidentally noted is a segment of the urinary bladder extending to the right inguinal canal.

### IMPRESSION:

FLUID ADJACENT TO THE GREATER TROCHANTER SUGGESTING GREATER TROCHANTERIC BURSITIS.

Thank you for referring this patient to us.
