PATIENT NAME: DIALLO, AISSATOU
PATIENT DOB: 06/23/1970
CHART NUMBER: 044956
EXAM DATE: APRIL 26, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE LEFT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The anterior and posterior horns of the medial and lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear. The cartilaginous surfaces in the medial and lateral compartments are well maintained.

There is partial tear of the anterior cruciate ligament. The posterior cruciate ligament is normal. The medial and lateral collateral ligaments are intact. The quadriceps tendon and patellar tendons demonstrate no abnormality.

There is lateral tracking of the patella and there is a suprapatellar effusion. There is no patellar fracture or dislocation. Subcutaneous swelling and edema is present in the anteromedial and to a greater extent the anterolateral aspects of the knee.

Normal signal is present in the femoral condyles and the tibial plateau. The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity. The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT.
2. CHONDROMALACIA PATELLA WITH LATERAL TRACKING OF THE PATELLA AND SUPRAPATELLAR EFFUSION.
3. SUBCUTANEOUS SWELLING AND EDEMA IN THE ANTERIOR ASPECT OF THE KNEE.

Thank you for the courtesy of this referral.
