14 BRUCKNER BLVD
BRONX, NY 10454****MRI OF THE LEFT SHOULDER WITHOUT CONTRAST****INDICATION:** Pain, MVA**COMPARISON:** No prior study was available for comparison at the time of dictation.**TECHNIQUE:** T1, T2, and PD, axial, coronal, and sagittal sequences were obtained.**FINDINGS:**

No fracture. Bone marrow signal is normal. Glenohumeral joint narrowing and cartilage thinning.

No os acromiale. Moderate AC joint arthrosis with capsular hypertrophy. Lateral downsloping acromion which may be causing impingement.

High-grade partial tear of the anterior supraspinatus tendon at the insertion and critical zone with severe tendinopathy and fraying of the remainder of the tendon. Torn fibers are retracted to the joint level. Tendinopathy of the infraspinatus tendon. Tendinopathy of the subscapularis tendon. Moderate biceps tenosynovitis. Tear of the posterior, superior, and anterior labrum.

The inferior glenohumeral ligament is intact. Teres minor tendon is normal. No muscle atrophy.

Small joint effusion. Mild subacromial/subdeltoid bursitis.

IMPRESSION:

- Moderate AC joint arthrosis with capsular hypertrophy.
- High-grade partial tear of the anterior supraspinatus tendon at the insertion and critical zone with severe tendinopathy and fraying of the remainder of the tendon. Torn fibers are retracted to the joint level.
- Tendinopathy of the infraspinatus tendon. Tendinopathy of the subscapularis tendon.
