**PATIENT NAME:** BENJAMIN, JOSE  
**DATE OF BIRTH:** 08/01/1963  
**MRN #:** BR48246  
**DATE OF SERVICE:** 09/22/2022  
**REFERRING PHYSICIAN:** COLIN CLARKE, MD

**MRI EXAMINATION OF THE RIGHT KNEE WITHOUT CONTRAST**

**INDICATION:** Right knee pain. Status post MVA.

**TECHNICAL FACTORS:** MRI of the right knee utilizing multiple imaging sequences.

**COMPARISON:** None.

**FINDINGS:**

There is a small to moderate sized knee effusion. A small thin popliteal cyst is seen.

No meniscal tears are demonstrated.

The cruciate ligaments, patellar tendon, and included quadriceps tendon demonstrate no evidence of a tear with Hoffa's and the quadriceps fat pad normal.

The patella, patellar cartilage, and patellar retinacula are normal.

No collateral ligament tears are seen. The articular cartilage of the medial joint compartment is normal. A focal short segment full thickness cartilage defect of the posterolateral femoral condyle is seen.

No areas of significant marrow signal abnormality are seen with signal from the muscular structures normal.

What likely represents a small portion of the ligament of Humphrey is noted anterior to the posterior cruciate ligament.

There is mild lateral shift and tilting of the patella.

**IMPRESSION:**

- 1. Small to moderate sized knee effusion.**
- 2. Small thin popliteal cyst.**
