

**Patient:** RUIZ, JESSICA  
**Date of Birth:** 08-29-1980  
**Phone:** (347) 499-3899  
**MRN:** K144100 **Acc:** KR208991  
**Date of Exam:** 08-10-2022

Exam requested by:  
MARK MCMAHON MD  
876 PARK AVE  
NEW YORK NY 10021

**EXAM: MRI-HIP WITHOUT CONTRAST LEFT**

**TECHNIQUE:** Coronal proton density and proton density fat saturated images, sagittal proton density fat saturated and axial proton density fat saturated images were obtained in a 3 Tesla Magnet

**INDICATION:** Status Post Trauma

**FINDINGS:** There is a partially visualized large subcutaneous fluid collection in the superolateral aspect of the hip adjacent to the gluteus medius muscle for which further evaluation is in order.

The marrow signal is normal with no fracture or osteochondral defect.

The femoroacetabular labrum is intact with no evidence of a tear.

There is a normal sphericity of the femoral head.

The anterior, posterior, abductor and adductor musculature is unremarkable.

The origin hamstring tendons is unremarkable.

**IMPRESSION:** There is a partially visualized large subcutaneous fluid collection in the superolateral aspect of the hip adjacent to the gluteus medial muscle for which further evaluation is recommended

Thank you for the opportunity to participate in the care of this patient.
