Re: Steele, Peter

DOB: 07/20/1960

DOA: 05/03/2022

INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Right shoulder, left shoulder, right knee, and left knee pain.

HISTORY OF PRESENT ILLNESS: A 61-year-old right-hand dominant male involved in a motor vehicle accident on 05/03/2022. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the passenger's front side. The airbags did not deploy. The EMS did not arrive on the scene. The police were called to the scene of the accident. The patient did not go to any hospital that same day. The patient presents today complaining of right shoulder, left shoulder, right knee, and left knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 1 month with no relief.

WORK HISTORY: The patient is currently not working.

PAST MEDICAL HISTORY: Diabetes and CA of the prostate in remission.

PAST SURGICAL HISTORY: Benign brain tumor excision in 2012, appendectomy about 20 years ago, and prostate removal in 2018.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: Metformin 1000 mg, Trulicity, ASA 81 mg, and unable to recall the rest.

SOCIAL HISTORY: The patient is a nonsmoker. The patient does not drink alcohol/drinks alcohol occasionally. The patient does not use recreational drugs.

ADL CAPABILITIES: The patient states that he can walk for 1 block. He can stand for 20 minutes before he has to sit. He can sit for 30 minutes before needing to change positions

secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: play sports, driving, lifting heavy objects, carrying heavy objects, reaching overhead, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

PRESENT COMPLAINTS: Right shoulder: Right shoulder pain is 8/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness, weakness, and clicking. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain. Worse with range of motion and improves with medication.

Left shoulder: Left shoulder pain is 8/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness, weakness, and clicking. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain. Worse with range of motion and improves with medication.

Right knee: Right knee pain is 7/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has difficulty rising from a chair and has difficulty going up and down stairs. The patient also notes buckling.

Left knee: Left knee pain is 9/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has difficulty rising from a chair and has difficulty going up and down stairs. The patient also notes buckling.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.

Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

GU: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders.

Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 6 feet, weight is 212 pounds, and BMI is 28.7. The right shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 115/180 degrees, adduction 10/45 degrees, forward flexion 100/180 degrees, extension 30/60 degrees, internal rotation 30/90 degrees, and

external rotation 65/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The left shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 100/180 degrees, adduction 10/45 degrees, forward flexion 115/180 degrees, extension 30/60 degrees, internal rotation 35/90 degrees, and external rotation 65/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

The right knee reveals tenderness along the medial joint line, lateral joint line, superior pole of patella, and inferior pole of the patella. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Positive McMurray test. Positive Lachman test. Positive patellofemoral grinding test. Positive anterior drawer. Negative posterior drawer. Range of motion reveals flexion 80/130 degrees and extension 3/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the right lower extremity.

The left knee reveals tenderness along the medial joint line, lateral joint line, superior pole of patella, and inferior pole of the patella. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Positive McMurray test. Positive Lachman test. Positive patellofemoral grinding test. Positive anterior drawer. Negative posterior drawer. Range of motion reveals flexion 80/130 degrees and extension 3/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the left lower extremity.

DIAGNOSTIC TESTING: MRI of the right shoulder, done on 05/25/2022, shows narrowing and hypertrophy of the acromioclavicular joint, which may be impinging upon the supraspinatus muscle tendon complex. High-grade partial tear of the supraspinatus tendon with fluid in the glenohumeral joint and the subacromial/subdeltoid bursa. Biceps tendinosis. MRI of the left shoulder, done on 05/25/2022, shows tendinosis of the supraspinatus tendon with focal undersurface tears and a partial tear of the bursal surface of the distal supraspinatus tendon near the attachment site and fluid in the subacromial/subdeltoid bursa. Biceps tendinosis. No fractures or acute labral tear. MRI of the right knee, done on 05/25/2022, shows partial tear of the anterior cruciate ligament. Suprapatellar effusion. Sprain or partial tear of the medial collateral ligament with tear of the medial meniscus. MRI of the left knee, done on 05/25/2022, shows suprapatellar effusion. Partial tear of the anterior cruciate ligament. Sprain of the medial collateral ligament and focal linear tear of the posterior horn of the medial meniscus.

ASSESSMENT:

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.81 Shoulder tendinitis, right shoulder.

4. M75.41 Impingement, right shoulder.
5. M75.21 Bicipital tendinitis, right shoulder.
6. M25.511 Pain, right shoulder.
7. S49.91XA Injury, right shoulder.
8. M89.311 Acromioclavicular joint hypertrophy, right shoulder.
9. M25.411 Joint effusion, right shoulder.
10. S46.012A Partial rotator cuff tear, left shoulder.
11. M24.812 Internal derangement, left shoulder.
12. M75.82 Shoulder tendinitis, left shoulder.
13. M75.52 Bursitis, left shoulder.
14. M75.22 Bicipital Tendinitis, left shoulder.
15. M25.512 Pain, left shoulder.
16. S49.92XA Injury, left shoulder.
17. M25.412 Joint effusion, left shoulder.
18. S83.241A Medial meniscus tear, right knee.
19. M23.91 Internal derangement, right knee.
20. S83.519A Anterior cruciate ligament tear, right knee.
21. S83.411A Medial collateral ligament sprain, right knee.
22. M25.461 Joint effusion, right knee.
23. S80.911A Injury, right knee.
24. M25.561 Pain, right knee.
25. S83.242A Medial meniscus tear, left knee.
26. M23.92 Internal derangement, left knee.
27. S83.519A Anterior cruciate ligament tear, left knee.
28. S83.412A Medial collateral ligament sprain, left knee.
29. M25.462 Joint effusion, left knee.
30. S80.912A Injury, left knee.
31. M25.562 Pain, left knee.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder, left shoulder, right knee, and left knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder, left shoulder, right knee, and left knee 3 days/week.
6. Recommend steroid injections with pain management for right shoulder, left shoulder, right knee, and left knee.
7. Discussed right shoulder, left shoulder, right knee, and left knee arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient would like to proceed with surgery.
8. The patient needs medical clearance prior to surgery.
9. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder, left shoulder, right knee, and left knee pathology in

quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.

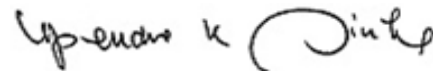

10. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
11. All the benefits and risks of the right shoulder, left shoulder, right knee, and left knee arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
12. All the questions in regard to the procedure were answered.
13. The patient verbally consents for the arthroscopy of right shoulder, left shoulder, right knee, and left knee and the patient will be scheduled for left knee surgery. On the day of the surgery, before the procedure, the surgeon will explain all related questions of the procedure. The patient will sign a written consent and be witnessed by the surgeon.
14. The patient will follow up 1-2 weeks postop or in 2 months if surgery has not been performed yet.

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
