**MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST**

RE: SAINT JEAN KATIANA, MICHELLE  
DOS: 09/29/2022  
DOB: 09/27/1989  
MRN: FC0012390

Referring Physician: Dr. Ross-Distin  
Referring Physician Phone #: (845) 201-5909

**CLINICAL INDICATION:**

Right shoulder pain status-post motor vehicle accident.

**TECHNIQUE:**

MRI of the right shoulder utilizing multiple imaging sequences.

**FINDINGS:**

There is mild hypertrophy of the acromioclavicular capsule not contacting the bursal surface of the supraspinatus muscle/tendon. A trace amount of fluid is seen in the subacromial/subdeltoid bursa with a shoulder effusion not seen.

There is tendinosis of the rotator cuff tendons. No rotator cuff tears are seen.

No labral tears are identified. The bicipital and intraarticular portions of the biceps tendon are grossly normal.

No areas of significant marrow signal abnormality are seen with signal from the muscular structures normal.

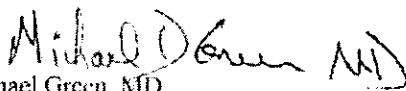

No areas of significant marrow signal abnormality are seen.

The coracoclavicular ligament is intact.

**IMPRESSION:**

1. Mild hypertrophy of the acromioclavicular capsule not contacting the bursal surface of the supraspinatus muscle/tendon.
2. Trace amount of fluid in the subacromial/subdeltoid bursa.
3. Tendinosis of the rotator cuff tendons.

Thank you for the courtesy of this referral and we look forward to being of service to you in the future.
