Report Date: 08/21/2022

ADNAN QURESHI MD
14 BRUCKNER BLVD
BRONX, NY 10454

MAGNETIC RESONANCE IMAGING OF THE RIGHT KNEE

TECHNIQUE: Multiplanar, multisequential MRI was performed in the 30 degree tilt position.

HISTORY: The patient complains of outer right knee pain. MVA 2/27/22.

INTERPRETATION: There is central type I signal involving the posterior horn of the medial meniscus.

There is strain of the medial collateral ligament extending to its femoral attachment site.

Synovial fluid at the anterior tibiofemoral articulation with a paucity of synovial fluid at the patellofemoral articulation.

There is outlining of a thin medial patellofemoral plica.

Osseous signal and morphology are otherwise unremarkable. The lateral meniscus, lateral collateral ligament, the anterior and posterior cruciate ligaments, quadriceps and patellar tendons are otherwise unremarkable.

IMPRESSION:

- Central type I signal involving the posterior horn of the medial meniscus.
- Strain of the medial collateral ligament extending to its femoral attachment site.
- Synovial fluid at the anterior tibiofemoral articulation with a paucity of synovial fluid at the patellofemoral articulation.
- Outlining of a thin medial patellofemoral plica.

Thank you for referring your patient to us for evaluation.

Sincerely,

JONATHAN URENA
