PATIENT:	WILLIAMS, CHERYL	EXAM DATE:	07/12/2022 3:00 PM
STUDY DESCRIPTION:	MRI SHOULDER WITHOUT CONTRAST	MRN:	WILC71139
DOB:	09/22/1972	REFERRING PHYSICIAN:	Jurkovich, Michael
CLINICAL HISTORY:	N/F Left Shoulder Pain after MVA.	GENDER:	F

**LEFT SHOULDER MRI WITHOUT CONTRAST**

**HISTORY:** Left shoulder pain status post motor vehicle accident

**TECHNIQUE:** Multiplanar, multi-sequence MRI of the left shoulder was performed without intravenous contrast.

**COMPARISON:** None

**OSSEOUS STRUCTURES/ MARROW** there is increased bone marrow edema of the proximal left humerus glenoid portion of the scapula and AC joint. There is no fracture or dislocation or osteonecrosis.

**ROTATOR CUFF:**

Supraspinatus: There is a intramuscular cyst of the supraspinatus tendon, fluid seen inferiorly and intrasubstance increased signal indicating partial tear at the articular surface with no muscle or tendon retraction

Infraspinatus: Muscles and tendons intact

Teres minor: Muscles and tendons intact

Subscapularis: Muscles and tendons intact

**MUSCLES:** No muscle edema or fatty atrophy

**AC JOINT :** AC joint pulmonary edema present with hypertrophy contributing to supraspinatus outlet obstruction

PATIENT:	WILLIAMS, CHERYL	EXAM DATE:	07/12/2022 3:00 PM
STUDY DESCRIPTION:	MRI SHOULDER WITHOUT CONTRAST	MRN:	WILC71139
DOB:	09/22/1972	REFERRING PHYSICIAN:	Jurkovich, Michael
CLINICAL HISTORY:	N/F Left Shoulder Pain after MVA.	GENDER:	F

**BICEPS TENDON:** Long head biceps tendon is normal and within the bicipital groove with tenosynovitis

**LABRUM/LIGAMENTS:** Labrum and ligaments are intact

**CORACOACROMIAL/ ROTATOR INTERVAL** rotator interval intact

**GLENOHUMERAL CARTILAGE:** Articular surface intact with no joint effusion

**SYNOVIUM/JOINT FLUID:** No sign or hypertrophy or joint effusion present

**NEUROVASCULAR STRUCTURES:** Normal caliber and course

**PERIPHERAL SOFT TISSUES:** Normal soft tissues

## IMPRESSION:

1. increased bone marrow edema of the proximal left humerus glenoid portion of the scapula and AC joint.
2. There is a intramuscular cyst of the supraspinatus tendon, fluid seen inferiorly and intrasubstance increased signal indicating partial tear at the articular surface with no muscle or tendon retraction of the supraspinatus tendon
3. AC joint pulmonary edema present with hypertrophy contributing to supraspinatus outlet obstruction
4. tenosynovitis of the long head biceps tendon.
