FILE #: 6537PATIENT: MORENO ROMERO SANTIAGO
EXAM: MRI OF THE RIGHT SHOULDER

Dear Dr. Touliopoulos:

Your patient, Moreno Romero Santiago, had an MRI examination of the right shoulder without contrast performed on 03/28/2019.

INDICATION: Pain. Status post injury.

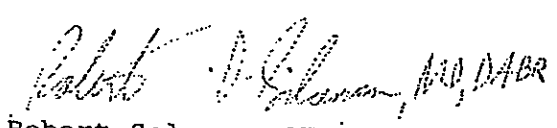

TECHNIQUE: Multi-orthogonal imaging performed using T1-weighted and T2-weighted factors.

FINDINGS: Impingement and supraspinatus outlet syndrome are noted. Labrum and biceps tendon are unrevealing. Erosion and/or osteochondral defect is noted. Joint effusion is noted. There is subchondral cyst formation. Gleno-humeral ligament is unrevealing. No bone marrow edema is seen. Small axillary lymph nodes are noted.

IMPRESSION:

1. EROSION AND/OR SUBCHONDRAL CYST.
2. IMPINGEMENT.
3. CUFF TENDINOSIS AND/OR TENDINITIS.
4. SMALL AMOUNT OF JOINT FLUID.
5. SMALL AXILLARY LYMPH NODES.
6. NO OTHER FINDINGS OF SIGNIFICANCE.

Thank you for referring this patient to us.
