PATIENT NAME: BROWN, KERRISHA
DATE OF BIRTH: 03/03/1992
MRN #: BR47721
DATE OF SERVICE: 07/17/2022
REFERRING PHYSICIAN: JORDAN FERSEL, MD

MRI EXAMINATION OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: Left shoulder pain. Status post MVA.

TECHNICAL FACTORS: MRI of the left shoulder utilizing multiple imaging sequences.

COMPARISON: None.

FINDINGS:

There is mild hypertrophy of the acromioclavicular capsule. This abuts the bursal surface of the supraspinatus muscle/tendon. No significant fluid is present within the subacromial-subdeltoid bursa with a shoulder effusion not seen.

No rotator cuff tears are identified. No labral tears are seen. The bicipital and intra-articular portions of the biceps tendon are grossly normal.

There is a punctate area of non-specific subcortical signal abnormality within the posterolateral aspect of the humeral head. Signal from the muscular structures is normal.

IMPRESSION:

1. Mild hypertrophy of the acromioclavicular capsule contacting the bursal surface of the supraspinatus muscle/tendon.
2. Mild tendonosis of the rotator cuff tendons.
3. Small area of non-specific subcortical signal abnormality in the posterolateral aspect of the humeral head.

Thank you for the opportunity to participate in the care of this patient.

A handwritten signature in black ink that reads "Michael D. Green MD".
