GREGORY ABRAMOV, N.P.
1314 CONEY ISLAND AVENUE
BROOKLYN, NY 11230

PATIENT: STELLA TEVOEDIRE
DOB: 07/05/1967
DOS: 04/06/2022
CHART #: 24801
EXAM: MRI OF THE LUMBAR SPINE WITHOUT CONTRAST

HISTORY: Low back pain.

TECHNIQUE: Multiplanar MR imaging of the lumbar spine was performed without contrast on Hitachi open MRI unit.

Sagittal and axial T1 weighted, sagittal STIR weighted and sagittal and axial T2 weighted images of the lumbar spine were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: There is no fracture or bone bruise.

Pedicles are intact. The pars interarticularis are unremarkable.

There are no stress changes. Posterior elements are symmetric. The musculature is unremarkable. There is no paraspinal abnormality. The retroperitoneum is unremarkable. The visualized solid organs are unremarkable. There is no hematoma or seroma.

There is normal disc height throughout. There is mild desiccation at the L2-L3 level. There is no fracture or listhesis. Pedicles are intact. There is no stress reaction.

The retroperitoneum is unremarkable.

The conus medullaris is in normal position.

Moderate soft tissue edema overlies the lumbar musculature.

L1-L2: There is no central or foraminal stenosis.

L2-L3: There is no central or foraminal stenosis.

L3-L4: There is no central or foraminal stenosis.

PATIENT: STELLA TEVOEDIRE

DOB: 07/05/1967

DOS: 04/06/2022

CHART #: 24801

EXAM: MRI OF THE LUMBAR SPINE WITHOUT CONTRAST

PAGE 2

L4-L5: There is a diffuse disc bulge. There is no central or foraminal stenosis. There is a herniation seen prominently at the left foramen.

L5-S1: There is a diffuse disc bulge.

Incidental note is made of a fibroid uterus with moderate enlargement.

IMPRESSION:

1. A HERNIATION IS SEEN AT THE PROXIMAL LEFT FORAMEN AT THE L4-L5 LEVEL, AS NOTED.
2. STRAIGHTENING OF THE LUMBAR LORDOSIS SUGGESTS PROMINENT SPASM.
3. DISC BULGES ARE SEEN AT THE L4-L5 AND L5-S1 LEVELS.
4. THERE IS SOFT TISSUE EDEMA OVERLYING THE LUMBAR MUSCULATURE.
5. AN ENLARGED FIBROID UTERUS IS SEEN, WHICH IS PARTIALLY VISUALIZED.

Thank you for referring this patient to us.
