RICHMOND HILL NY 11418

**SITE PERFORMED: LHR LYNBROOK**  
**SITE PHONE: (631) 277-1600**

**Patient: MOHSIN, MOHAMMED**  
**Date of Birth: 09-09-1969**  
**Phone: (917) 609-6754**  
**MRN: 932058ACPNY Acc: 1025272989**  
**Date of Exam: 11-07-2022**

**EXAM: MRI RIGHT ANKLE WITHOUT CONTRAST**

**HISTORY:** Right ankle pain over the Achilles insertion

**TECHNIQUE:** Multiplanar imaging with and without fat suppression

**COMPARISON:** No comparison

**FINDINGS:**

No fracture distal tibia. No fracture distal fibula. No osteochondral defect talar dome. Joint effusion.

No coalition. No erosion. Calcaneocuboid joint intact. Talonavicular joint intact.

Plantar fascia thickened at the origin of the central and medial band with degeneration and fraying. 5 mm spur with no fracture. Soft tissue edema with no bursitis.

Achilles circumferential enlargement and tendinopathy from the low-lying myotendinous junction to the insertion. Minimal prominence of the posterior superior calcaneal process with bursitis and soft tissue edema. Low-grade 5 x 7 mm tear of the anterior Achilles just proximal to the insertion. 8 mm spur with traction edema and no fracture. Intratendinous ossification at the insertion.

Extensor tendons intact. No tenosynovitis.

Peroneal tendons intact. No tenosynovitis or subluxation. Interstitial fraying peroneus longus at the distal fibula.

Posterior tibial tendinopathy with tenosynovitis. Remaining flexor tendons intact. Tenosynovitis flexor hallucis. No lesion tarsal tunnel. No muscle tear or atrophy.

No lesion tarsal sinus. Scarring of the ligaments. 4 mm traction cyst calcaneus

Syndesmosis intact. Tibiofibular ligaments subacute moderate grade anterior tear. Talofibular ligaments subacute high-grade anterior tear. Calcaneofibular ligament subacute moderate grade tear. Deltoid ligaments intact. Spring ligament

intact.

Soft tissue edema. No hematoma or bursitis

**IMPRESSION:**

1. Circumferential enlargement of the Achilles from the low-lying myotendinous junction to the insertion with tendinopathy and low-grade 5 x 7 mm tear of the anterior fibers just proximal to the insertion. Intratendinous ossification and 8 mm spur with traction edema and no fracture. Bursitis and peritendinous edema.
2. Plantar fascial thickening and degeneration and fraying at the origin with 5 mm spur and no fracture. Soft tissue edema with no bursitis.
3. Posterior tibial tendinopathy and tenosynovitis.
4. Subacute partial tears of the anterior tibiofibular ligament anterior talofibular ligament and calcaneofibular ligament.

Thank you for the opportunity to participate in the care of this patient.
