PATIENT: QUINONES, ANNA
FILE#: 045051
DOB: 02/08/1988
DOS: 08/04/2022
PHYSICIAN: DR. KOPACH, ALEKSANDR

MRI OF THE RIGHT KNEE:

Protocol: T1, T2 axial and sagittal sequences

Clinical history: Knee pain, s/p injury

Findings: The anterior and the posterior horns of the medial and the lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear.

The cartilaginous surfaces in the weight-bearing aspects of the knee are intact.

There is a sprain or partial tear of the anterior cruciate ligament with intra-articular joint effusion. The posterior cruciate ligament is normal in position and appearance.

The medial and lateral collateral ligaments are intact. The quadriceps tendon and the patellar tendons are normal.

There is a moderate sized suprapatellar effusion and there is lateral tracking of the patella. The medial and lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There is no acute femoral, tibial, or fibular fracture.

The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity.

The popliteal fossa is unremarkable.

IMPRESSION:

1. SPRAIN OR PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT WITH INTRA-ARTICULAR JOINT EFFUSION.
2. MODERATE SIZED SUPRAPATELLAR EFFUSION WITH LATERAL TRACKING OF THE PATELLA.
3. NO ACUTE FRACTURE OR OSTEOCHONDRAL LESION.

Thank you for the courtesy of this referral.
