PATIENT:	SEABROOK, LATOYA	EXAM DATE:	04/20/2022 12:19 PM
STUDY DESCRIPTION:	MRI SHOULDER WITHOUT CONTRAST	MRN:	SEAL61713
DOB:	10/08/1976	REFERRING PHYSICIAN:	Mcgee, John J
CLINICAL HISTORY	PAIN IN RT. SHOULDER AFTER MVA	GENDER:	F

#### MAGNETIC RESONANCE IMAGING OF RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: Pain in right shoulder after motor vehicle accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of the right shoulder was performed without intravenous contrast.

COMPARISON: None available.

OSSEOUS STRUCTURES/MARROW: Normal marrow signal.

#### ROTATOR CUFF:

SUPRASPINATUS: A full thickness tear of the anterior fibers of the supraspinatus tendon noted with no retraction. No skeletal muscle atrophy is seen.

INFRASPINATUS: The infraspinatus tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

TERES MINOR: The teres minor tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBSCAPULARIS: The subscapularis tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBACROMIAL/SUBDELTOID BURSA: Mild fluid in subacromial-subdeltoid bursa compatible with bursitis or may be seen with full thickness rotator cuff tear.

MUSCLES: No muscle edema or fatty muscle atrophy.

AC JOINT: Acromioclavicular joint disease with capsular thickening and small marginal osteophytes. Lateral downsloping of the acromion with subacromial spurring. These factors contribute to rotator cuff impingement.

BICEPS TENDON: Intact long-head of the biceps tendon.

**LABRUM/LIGAMENTS:** No labral tear or ligament abnormalities.

**CORACOACROMIAL LIGAMENT/ROTATOR INTERVAL:** Rotator interval is normal.

**GLENOHUMERAL CARTILAGE:** Intact articular cartilage.

**SYNOVIUM/JOINT FLUID:** No joint effusion or synovial thickening.

**NEUROVASCULAR STRUCTURES:** Normal in course and caliber.

**PERIPHERAL SOFT TISSUES:** Normal.

**IMPRESSION:**

1. Full thickness tear of the anterior fibers of the supraspinatus tendon with no retraction.
2. Mild fluid in subacromial-subdeltoid bursa compatible with bursitis or may be seen with full thickness rotator cuff tear.
3. Acromioclavicular joint contributing to rotator cuff impingement.
