PATIENT NAME: ALSAID, YEHYA
PATIENT DOB: 06/20/1976
CHART NUMBER: 044957
EXAM DATE: APRIL 27, 2022
REFERRING PHYSICIAN: DR. KOPACH, ALEKSANDR

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle. Increased signal is present in the supraspinatus tendon consistent with tendinosis. There is a high grade partial tear of the distal aspect of the supraspinatus tendon near its insertion. The infraspinatus tendon and subscapularis tendon are intact. There is fluid present in the subacromial/subdeltoid bursa.

The humeral head is normal. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

IMPRESSION:

1. INTACT ACROMIOCLAVICULAR JOINT WITH UNDERSURFACE HYPERTROPHY IMPINGING UPON THE SUPRASPINATUS MUSCLE TENDON COMPLEX.
2. TENDINOSIS AND HIGH GRADE PARTIAL TEAR OF THE BURSA SURFACE OF THE DISTAL SUPRASPINATUS TENDON WITH FLUID IN THE SUBACROMIAL/SUBDELTOID BURSA.

Thank you for the courtesy of this referral.
