<b>PATIENT NAME:</b>	<b>LUCY QUEZADA</b>
<b>REFERRING PHYSICIAN:</b>	<b>JORDAN FERSEL</b>
<b>SERVICE:</b>	<b>MRI RIGHT KNEE</b>
<b>DATE OF SERVICE:</b>	<b>10/20/2022</b>

---

**MRI SCAN OF THE RIGHT KNEE****HISTORY:** History of MVA.**TECHNIQUE:** Non-contrast MRI of the right knee was performed utilizing multiplanar and multisequence acquisition.**FINDINGS:**

There is joint fluid compatible with synovitis. There is no evidence of popliteal cyst formation or muscular tear. There is no evidence of fracture, dislocation, or bone marrow abnormalities to be suspicious for bone contusions, stress fractures, or acute trabecular microfractures.

The anterior and posterior cruciate ligaments as well as the medial and lateral collateral ligament complexes are intact.

The popliteal and quadriceps tendons and the patellar ligament are unremarkable. The patellar retinacula are intact.

The medial and lateral meniscal structures are intact. There is no evidence of a meniscal tear.

**IMPRESSION:**

**Presence of joint fluid compatible with synovitis.**

**The anterior and posterior cruciate ligaments as well as the medial and lateral collateral ligament complexes are intact.**

**The meniscal structures are intact.**

**In the given clinical setting of trauma, the study is otherwise inconclusive which implies the need for further clinical investigation.**

Thank you for the courtesy of this consultation.
